

8th December 2022

CMM Report December 2022

- Skills Reform
 - Future

Vet Reform

Aim

- Remove under-utilized qualifications and units
- Broaden vocational outcomes – produce transferable skills.
 - Reduce complexity of qualification and unit structure

Vet Reform

Implementation

- The new system, based around Industry Clusters, will be in place by 1st of January 2023.
 - Proposed there will be nine Industry Clusters.
- Industry will develop a proposal, in order to win a government grant, for an Industry Cluster (throughout 2022).
- Existing SSOs and IRCs will remain during the transition period, 2022.

What is Proposed

- Industry Clusters will be responsible for liaison with industry and educators to produce qualifications and associated units.
- Qualifications will be made more generic, smaller less specific Core.
 - Skill Standards will replace Units of Competency.
 - Skill Standards will be either
 - Industry Specific
 - Cross Sector
 - Foundation

What is Proposed

- Each [Skill Standard](#) will have an associated Training and Assessment Requirement ([TAR](#)) document, similar to the Unit and Assessment Requirements we currently have.
- The endorsed component of each Skill Standard, and associated TAR, will be kept as generic as possible.

What is Proposed

- Qualifications will be more generic, one qualification with a number of streams.
- Qualification cores will have reduced number of Skill Standards, four or five, and will be of a generic nature.
 - Emphasis seems be on Skill Sets

Future

- Still many unanswered questions. Important ones are;
- Will there be specific committees under the Industry Clusters, such as automotive?
- How will RTOs/teachers have meaningful input with these committees, if and when they exist.
